

Create User

Overview

This API allows a user with Admin or Lab Manager role to create a new user account in the system.

The system will automatically:

1. Validate input data (format, business logic) using CreateUserValidator and check logic in CreateUserHandler.
2. Generate a random temporary password and encrypt it using BCrypt.
3. Encrypt sensitive data (Email, Phone, Name...) using EncryptionHelper (via IUserRepository).
4. Save the new user to the database.
5. Send an email to the new user (using IEmailService, implemented as SmtpEmailService), containing the login email and temporary password.

This API does not allow creating an account with the "ADMIN" role.

API Specification

API	URL
POST	/api/user/create
Permission	ADMIN, LAB_MANAGER

Request sample

```
{  
  "roleCode": "LAB_USER",  
  "email": "new.tech@example.com",  
  "phoneNumber": "0987654321",  
  "fullName": "Jane Doe",  
  "identifyNumber": "1234567890",  
  "gender": "Female",  
  "age": 28,  
  "address": "456 Oak Avenue, City",  
  "dateOfBirth": "05/15/1996"  
}
```

Field	Description	Data Type	Examples
roleCode	New user role code	string	userName
email	The user's (unique) email address.	string	user@example.com
phoneNumber	Phone number	string	0987654321
